

Signhify Hunter — Roadmap

Codename: HUNTER · **Version:** 1.0 · **Date:** 07 Aug 2026 From internal acquisition engine (Weeks 1–8) to productized Signhify product (Quarter 4).

Horizon View

W1-8 → MVP LIVE: first booked meetings (internal tool)
Q3 → V1.5: multi-channel, nurture, CRM export (internal, polished)
Q4 → V2: productized – Signhify Hunter as paid SaaS (multi-tenant)
2027 → V3: autonomous account-based engine, integrations marketplace

Phase 1 — Foundations & MVP (Weeks 1–8) · *internal tool*

Goal: 5–10 qualified meetings/week booked, ≤ 2h founder time.

Milestone	Weeks	Exit criteria
M0 Foundations	1	Repo, Supabase, queues, compliance skeleton green
M1 Scout	1	100+ leads from 2 sources, dedupe proven
M2 Enrich & Verify	1	≥ 85% verified email rate
M3 Qualify	0.5	Tier A/B/C + reasons, manual override
M4 Writer + Campaigns	1	First campaign w/ AI-personalized samples
M5 Delivery Engine	1.5	Warmup done, live sends ≤ 30/day, deliverability dashboard
M6 Respond + Inbox	1	HITL replies < 1 min, bookings in 2 clicks
M7 Analytics + Billing + Hardening	1	Funnel, Stripe, E2E green, go-live
Go-live ramp	1	Scale to 150/day/domain, first 10 meetings

KPIs at Phase 1 exit: 2,000+ leads/mo · 85% verified · 3–5% positive reply · 5–10 meetings/wk · < 0.1% complaints.

Phase 2 — V1.5: Sharpen the Loop (Quarter 3)

Goal: higher reply rates, more channels, less founder time.

- [] **LinkedIn channel v1:** semi-manual DM workflow (copy-ready + open-in-LinkedIn deep links), connection-note personalization, ToS-safe only
- [] **X channel:** public-post-trigger sourcing (people asking for dev help) → suggestion DMs
- [] **Nurture engine:** Tier-B drip (3-touch, 2-week cadence), re-score on signal changes
- [] **Semantic dedupe:** pgvector embeddings — catch same company via different domains/socials
- [] **CRM exports:** HubSpot + Pipedrive + CSV (deeper than V1)
- [] **Personalization 2.0:** tech-stack-aware hooks (e.g., "your site is Next.js..."), project-repo-aware case studies
- [] **A/B testing suite:** subject + body + CTA experiments with significance reporting
- [] **Meeting pipeline:** automated pre-meeting briefing card (lead signals + suggested agenda) attached to booked meetings
- [] **Founder mode:** daily digest email (yesterday's numbers, today's approval queue)

KPIs: positive reply 5%+ · 10–15 meetings/wk · founder time < 1 hr/wk · 4+ active channels.

Phase 3 — V2: Productize as Signhify Hunter SaaS (Quarter 4)

Goal: second revenue line for Signhify; other agencies pay for the engine.

- [] **Multi-tenant hardening:** workspace isolation review, audit, security pass
- [] **Onboarding:** connect domain → DNS wizard → warmup → first campaign templates (agency/studio ICP presets)
- [] **Template gallery:** 10 starter campaigns (SaaS dev, agency, AI automation, EdTech) — ships with the studio's own proven sequences
- [] **Billing full:** Pro \$49/mo (2 domains, 3k leads/mo), Agency \$149/mo (10 domains, 20k leads/mo, team seats), usage add-ons
- [] **Public site:** hunter.signhify.dpdns.org — cinematic landing (same design language), docs, pricing, affiliate program
- [] **API + webhooks:** lead/event streaming to customer CRMs
- [] **Signhify eat-own-dogfood:** Hunter is the acquisition engine for all future Signhify sales
- [] **Case study:** publish Hunter's own funnel data (with consent) as the flagship testimonial

KPIs: 30 paying agencies · \$5k MRR · NRR > 110%.

Phase 4 — V3: Autonomous Account Engine (2027)

Goal: from leads to accounts; from outreach to revenue orchestration.

- [] **Account-based mode:** target account lists → multi-contact sequences (CEO+CTO+founder), coordinated touches

- [] **Intent signals:** funding events, hiring spikes, tech migrations, competitor activity → auto-wake dormant campaigns
- [] **AI SDR conversations:** reply engine with escalating HITL (auto-answer FAQs, escalate anything novel)
- [] **Multi-channel orchestration:** email ↔ LinkedIn ↔ WhatsApp (with consent) unified journeys
- [] **Revenue analytics:** pipeline value, win rates by source/channel, CAC/LTV per channel — "the ROI sheet" feature
- [] **Integration marketplace:** n8n, HubSpot, Salesforce, Slack alerts, Google Sheets sync
- [] **Agent marketplace:** third-party agents (scrapers, enrichers, writers) sellable on Hunter

KPIs: 200 agencies · \$50k MRR · positive-reply benchmark library shared publicly.

Guardrails for Every Phase

1. **Deliverability is sacred** — never ship a volume feature before its reputation-protection (warmup/limits/alarms) ships with it.
 2. **Compliance is a feature** — unsubscribe/suppression/DSAR exist from M0 and are never bypassed.
 3. **ToS-aware by design** — platforms that prohibit automation get suggestion-mode, not loopholes.
 4. **Dogfood first** — every phase ships internally for 2 weeks before it's a product feature.
 5. **Data hygiene** — retention, dedupe, and suppression are quarterly review items, not one-time fixes.
 6. **AI costs tracked per campaign** — hard budget caps from day 1 (mini-model defaults).
-

Milestone Owners & Cadence

- Owner: Piyush Raj Singh (founder) — all phases, with AI pairing tools per `07_GOD_LEVEL_AGENT_PROMPT.md`.
- Review cadence: weekly funnel review (Mon 09:30), monthly roadmap re-plan, quarterly compliance & deliverability audit.
- Definitions: MVP = Phase 1 exit; Product-ready = Phase 3 exit; Scale = Phase 4.
