

Signhify Hunter — Theme Analysis, Design Inspiration & Credits

Source analysis of signhify.dpdns.org, signhify-ai-web.vercel.app, and recent Signhify projects — extracted for the Hunter product design system.

1. Website Analysis — signhify.dpdns.org (Studio HQ)

1.1 Design system (extracted)

Token	Value	Usage
Base background	Near-black <code>#0D0D14</code> ("obsidian")	Global page base
Electric orange	<code>#FF6B00</code>	Primary accent, CTA glow, active states
Amber / gold	<code>#F59E0B</code>	Secondary highlights, badges, ratings
Surface	Glassmorphism <code>rgba(255,255,255,0.03-0.06)</code>	Cards, panels over blurred imagery
Borders	<code>rgba(255,255,255,0.08)</code>	Hairline glass borders
Text	<code>slate-200</code> / <code>slate-400</code>	Primary / muted
Display font	Space Grotesk (300–700)	Headlines, hero
Body font	Inter (300–600)	UI copy
Motion	Framer Motion, glow pulses, scroll scenes	Cinematic feel

1.2 Thematic language

- **Cinema metaphor throughout:** "A film unfolding, scene by scene", "Scroll · Scene 01 of 4", "scripted, designed and shipped with conviction".
- **Anti-hype copy, big statements:** "STOP IMAGINING, START SHIPPING." · "Describe your idea. Signhify builds it."
- **Versioned identity:** "v2026.06 · Studio" badge.
- **Structure:** cinematic hero → marquee tech stack → preset gallery (hover-spotlight cards) → services grid (12 capabilities) → process (01–04) → ecosystem (6 live products) → founder section → CTA with Instant Sprint Scoper.
- **Trust signals:** MSME UDYAM registration, real shipped project URLs (not mockups), "100% Code Ownership on your GitHub from Day One", free credits, no lock-in.

1.3 What to reuse in Hunter

1. The **exact token set** (obsidian/orange/amber/glass) — Hunter must feel like the same family.
2. **Live-console streaming pattern** from `/ai` (Signhify AI): `[12:04:12] Scout: Parsing requirements...` style agent logs → Hunter's activity feed.
3. **Process-section treatment** (01 Describe → 02 Design → 03 Build → 04 Launch) → Hunter's funnel visualization.
4. **Gallery card pattern** (hover spotlight, "Open brief / Visit" links) → Hunter's campaigns and source cards.
5. **Founder proof block** with counts → Hunter's "results" dashboard strip.
6. **Ecosystem grid** (Studio/AI/Deploy/Marketplace/Cloud/OS — all LIVE) → Hunter slots in as the 7th product: acquisition engine.

2. App Analysis — signhify-ai-web.vercel.app (Signhify AI)

- **Tagline:** "Type less. Orchestrate more."
- **Identity:** `bg-obsidian text-slate-200 antialiased, html class="dark"` — pure dark theme SPA.
- **Fonts:** Inter + Space Grotesk (300–700) — same pair as studio.
- **Concept:** AI workspace with 7 specialized agents, BYOK, open source — the "agent pipeline UI" (Schema Design → Design Tokens → Code Gen → Test Suite → Deploy Setup) with live SSE console and glowing progress is the signature interaction.
- **Stack visible:** Next.js (build artifact: `assets/index-*.js`), React, Vite-style client bundle, Google Fonts.
- **What to reuse in Hunter:** the multi-agent progress pipeline UI (6 agents in Hunter = same visual pattern), the streaming console, "orchestrate" mental model — Hunter literally orchestrates agents, so the UI speaks the same language.

3. Recent Projects — Portfolio DNA & Credits

Project	Category	Stack	Design signal
Signhify AI (signhify-ai-web.vercel.app)	AI Workspace	Next.js, TanStack, Supabase, multi-provider AI	Agent pipeline UI, streaming console
Veepee Engineers (veepee-engineers.lovable.app)	Engineering brand	TanStack Start, Tailwind, Lovable	Cinematic industrial portfolio, confident typography
GymFlow (gymflow-saas.vercel.app)	SaaS	Next.js, Supabase, Stripe, Tailwind	Multi-tenant gym OS, cinematic dashboard
AutoReels AI (autoreels-ai.vercel.app)	AI automation	Python, ffmpeg, OpenAI, Whisper	Pipeline automation UI (Transcribe → Clip → Caption → Export)

Project	Category	Stack	Design signal
GigMind (gigmind-gamma.vercel.app)	Marketplace	Next.js, Postgres, Vercel AI SDK	AI match-score badges, two-sided marketplace
TuitionTrack (tuitiontrack-app.vercel.app)	EdTech	React, Supabase, Resend	Ops dashboard, WhatsApp notifications, Resend email — Resend is already a proven studio pattern → reuse for Hunter

Portfolio-wide design recipe (from `Signhify_assets/ALL_PROJECT_IMAGE_PROMPTS.md`): "Dark near-black background #0D0D14 · Electric orange #FF6B00 glow accents · Amber/gold #F59E0B highlights · Glassmorphism frosted-glass panels · Cinematic premium dark product screenshot · 16:9 · No watermarks" — applied to **every** project asset. Hunter inherits this recipe verbatim.

4. Hunter — Recommended Theme (derived)

- **Codename visual:** "HUNTER" = scout/radar metaphor. Radar-sweep motif in orange glow for loading/scanning states; target-lock animation on qualification; a "signal" pulse for live agent activity.
- **Dashboard = control room:** obsidian base, glass panels, orange glowing KPIs (matches GymFlow's glowing KPI cards), funnel bars with orange gradient, cinematic empty states.
- **Inbox = mission control:** suggestion cards glow amber when positive, red when risky; unread pulses orange.
- **Motion language:** slow cinematic transitions (studio standard), glow pulses on live indicators, streaming agent console (Signhify AI pattern).
- **Copy voice:** "Find them. Qualify them. Sign them." · "The studio's clients, found before they ask." · "Type less. Orchestrate more." family.

5. Credits & Attribution

Product & code: - Signhify studio & all listed projects — built by **Piyush Raj Singh** (Founder, Signhify).
 LinkedIn: [linkedin.com/in/piyushraj-singh](https://www.linkedin.com/in/piyushraj-singh) · GitHub: github.com/Warriorlegacy · Email: Piyushrajsingh092@gmail.com · WhatsApp: +91 62024 42690 - Signhify is a registered MSME · Govt. of India (UDYAM)

Framework & service credits (for Hunter docs/attribution page): - Frontend: React 19, TanStack Start, Tailwind CSS v4, shadcn/ui, Framer Motion - Backend: Node/TypeScript, Supabase (Postgres, Auth, Realtime), Prisma, Upstash Redis, Resend - AI: OpenAI (gpt-4o-mini), Anthropic (Claude Sonnet) - Data/sourcing: Firecrawl, GitHub API, Hacker News Algolia API, Reddit JSON, Product Hunt API, Hunter.io/Apollo, SerpAPI - Infra: Vercel, Cloudflare, Stripe, Axiom, Sentry - Design/build tooling: Lovable (used on portfolio builds incl. Veepee Engineers)

Asset credits (existing portfolio): - Project imagery generated via image-gen tools (ChatGPT Images) using Signhify's shared cinematic prompt recipe (`Signhify_assets/ALL_PROJECT_IMAGE_PROMPTS.md`); some stock assets sourced from stock marketplaces (e.g., iStock-style library files in `Signhify_assets/`).

6. Design Handoff for Builders

When implementing Hunter UI, open in this order: 1. `04_FRONTEND_PRD_TRD.md` — routes, components, acceptance criteria 2. This file §1–2 — the source-of-truth design system and signature patterns 3.

`Signhify_assets/ALL_PROJECT_IMAGE_PROMPTS.md` — the shared asset-prompt recipe (reuse for Hunter screenshots/OG images) 4. Live references: signhify.dpdns.org (structure + tokens), signhify-ai-web.vercel.app (agent pipeline + console)
